WATCHDOG 3250

Wireless 3250 ET Weather Station

The award-winning third generation of WatchDog Weather Stations offers integrated cellular modems that send essential turf data to the SpecConnect cloud. Use your PC or WatchDog Mobile app to view current conditions on your smartphone. Station set-up is easy, and configuration is simple with the WatchDog app.

The newly developed 3250 Wireless ET Weather Station is a mobile, fully integrated weather station. The station is solar powered and has a built-in modem, this means there are no power or network cables to attach - increasing the flexibility of the system.

With the SpecConnect cloud, you can easily view reports for degree-days, chill hours, disease and insect pressure, monthly weather reports, soil moisture trends and more.

Frost/temp alerts are sent to your smartphone so you can respond quickly and reduce turf damage. Now, you will have the real-time data you need to respond to changing weather conditions and make timely, smart decisions.

The Watchdog 3250 is the most elaborate version of the 3000 series weather stations. Next to all the actual measurements, it also performs a range of calculations, including the important ET (evapotranspiration) rate. These are all the measuring features of the 3250 Wireless ET Weather Station :

Features	3250	Range	Accuracy
Air Temperature	✓	-40 to 125 °C	+/- 0,3 °C
Relative Humidity	✓	0 to 100 %	+/- 2,0 % @ 25 °C
Rainfall	✓	0,254 mm resolution	+/- 2,0 % @ 5 cm / hr
Wind Speed	✓	0,1 to 322 km/h	+/- 3,0 km/h
Wind Direction	✓	1 to 359°, 1° increments	+/- 3,0°
Solar Radiation	✓	0 to 1500 W/m ²	+/- 5,0 %
External ports	1
